

CERTIFICATION PROGRAMS

Supplemental Requirements for Hydraulic Fabricators (HYD, HYDA)

Preface

The 2021 revision is a complete revision of the *Supplemental Requirements for Hydraulic Fabricators (HYD, HYDA)*.

Scope

This document (hereinafter referred to as the *Supplements*) provides the additional requirements for the Certification Program for Hydraulic Fabricators (HYD, HYDA) (hereinafter referred to as the *Program*).

Section 1 Before Your Audit

- HD1.1 All Participants and Applicants are required to have available and comply with these *Supplements* and the *Governing Requirements for Certification Programs* (hereinafter referred to as *GRs*).
- HD1.2 The *Standard for Certification Programs* (hereinafter referred to as *Standard*) is the primary normative document for all Certification Programs. Whenever there is a conflict between the *Supplements* and the *Standard*, the *Supplements* govern.
- HD1.3 *Standard* Chapter 1 (General Requirements) and Chapter 6 (Hydraulic Metal Structures Fabricator Requirements) apply to this *Program*.
- HD1.4 This *Program* will issue certifications as Hydraulic Metal Structures Fabricator. It includes two categories: Hydraulic Fabricator (HYD), and Hydraulic Fabricator - Advanced (HYDA). Each facility of a Participant or Applicant can only apply for and be certified under one category. Refer to the *Standard* for descriptions of these categories.
- HD1.5 Participants and Applicants are eligible to apply for the Complex Coatings Endorsement (CCE). For information and requirements concerning this endorsement, refer to *GR* Section 2, "Applying for Certification," or Section 8, "Making Changes to the Certification Scope," and the AISC *Supplemental Program Requirements for Applicators of Complex Coatings Endorsement (CCE)*.
- HD1.6 Participants and Applicants of the Program for Hydraulic Fabricators (HYD) are eligible to apply for the Fracture Control Endorsement for Hydraulic (FCEH). For information and requirements concerning this endorsement, refer to the *GRs* Section 2, "Applying for Certification," or Section 8, "Making Changes to the Certification Scope," and the Fracture Control Endorsement for Hydraulic (see Section 4 below).

NOTE: Participants and Applicants of the Hydraulic Fabricator - Advanced (HYDA) Program are not eligible for this endorsement.

CERTIFICATION PROGRAMS

HD1.7 Applicants to this *Program* must submit an application, payment, and all documents required by the *Application Document Submittal for AISC Certification—Fabricators and Manufacturers*.

Section 2 During Your Stage 2 Audit (All categories - HYD, HYDA)

HD2.1 The QMS that this *Program* applies to will be audited. Sample jobs/contracts of hydraulic metal structure work will be used to demonstrate capability to meet the *Program* regardless of whether the job/contract requires an AISC-certified fabricator.

HD2.2 Participants and Applicants are required to have work in the shop at the time of the audit that can be used to demonstrate compliance with the provisions of the *Program*. This work must be hydraulic work meeting the category. If it is known or suspected that there will not be this type of work in the shop at the time of the audit, AISC Certification must be contacted at least 30 days prior to the audit to discuss alternate arrangements.

Solutions may include a demonstration of capability (See *GR 5.11*) that follows the quality management system. Failure to have adequate work in the shop during the audit could result in an Additional Audit Fee being required or in a Rescheduled Audit Fee.

Hydraulic Fabricators - Advanced refer to Section 3 below for further details.

HD2.3 *Standard* Section 1.3, 6.3, 6.A.3 and 6.F.3 are clarified and modified by the following:

- All references must be available in English.

HD2.4 Bolt test method demonstrations will be required of participants at every Initial Certification (RFN) and Full Certification Renewal (RF) audit. The demonstrations shall comply with the current RCSC *Specification for Structural Joints Using High Strength Bolts* Section 7, "Pre-Installation Verification."

HD2.5 Participants and Applicants will be audited and evaluated to ensure compliance with the current applicable AWS welding code for the work typically performed in the shop, regardless of whether this is required by the sampled contracts and specifications.

Section 3 Hydraulic Fabricators - Advanced (HYDA)

AH3.1 Participants/Applicants applying for (HYDA certification shall be required to perform a demonstration of capability (See *GR 5.11*) during each Initial Certification (RFN) audit unless there is advanced hydraulic work in the shop at the time of the audit.

AH3.2 Participants renewing their HYDA certification shall be required to a demonstration of capability (See *GR 5.11*) during each Renewal Certification (R1, R2 or RF) audit unless there is advanced hydraulic work in the shop at the time of the audit or advanced hydraulic work has been completed within the past two years.

CERTIFICATION PROGRAMS

- AH3.3 Participants and Applicants renewing or applying for HYDA certification shall demonstrate that training has been performed at least annually for the communication of the requirements for advanced hydraulic work unless advanced hydraulic work has been performed within the past year. This training must be documented and available during the audit.
- AH3.4 The Certified Welding Inspector (CWI) may be an employee of the Participant and Applicant or contracted. In the case of the latter, contract status and qualifications of the CWI must be demonstrable. The CWI must be available during the audit.
- AH3.5 Bolt test method demonstrations will be required at every Initial Certification (RFN) and Full Certification Renewal (RF) facility audit. The demonstrations shall comply with the current RCSC *Specification for Structural Joints Using High Strength Bolts* Section 7, "Pre-Installation Verification," and with the Rotational Capacity Test for high-strength bolts in ASTM F3125 Annex A2.
- AH3.6 Participants and Applicants must develop, document and implement an effective Fracture Control Plan (FCP) as described in the *Standard* Section 6.F.12.1.
- AH3.7 Participants and Applicants must demonstrate capability to produce work that meets the requirements of the FCP. If the Participant has not produced Fracture Control (FC) work within the past three years, then its capability shall be demonstrated by running a job or a portion of a job as if it met FCP requirements.
- AH3.8 Participants and Applicants shall demonstrate that training has been performed at least annually for the requirements of their Fracture Control Plan. This training must be documented and available during the audit.
- AH3.9 Participants and Applicants renewing or applying for HYDA certification shall maintain the following documents in compliance with Clause 12, AASHTO/AWS D1.5M/D1.5, *Bridge Welding Code*, for Fracture Control Plan for Nonredundant Members Critical work and have them available for review during each audit:
1. One representative Welding Procedure Specification (WPS)
 2. Supporting Procedure Qualification Record (PQR)
 3. Welder Performance Qualification Record (WPQR) maintained current and qualified with records of period of effectiveness

Section 4 Fracture Control Endorsement for Hydraulic (FCEH)

- HF4.1 This endorsement requires concurrent Hydraulic Fabricator (HYD) certification.
- HF4.2 Participants and Applicants must develop, document and implement an effective Fracture Control Plan (FCP) as described in the *Standard* Section 6.F.12.1.
- HF4.3 Participants and Applicants must demonstrate capability to produce work that meets the requirements of their FCP. If the Participant has not produced Fracture Control (FC) work within the past three years, then its capability shall be demonstrated by running a

CERTIFICATION PROGRAMS

job or a portion of a job as if it met FCP requirements.

- HF4.4 Participants and Applicants shall demonstrate that training has been performed at least annually for the requirements of their FCP. This training must be documented and available during the audit.
- HF4.5 Participants and Applicants renewing or applying for the Fracture Control Endorsement for Hydraulic shall maintain the following documents in compliance with Clause 12, AASHTO/AWS D1.5M/D1.5, *Bridge Welding Code*, for Fracture Control Plan for Nonredundant Members Critical work and have them available for review during each audit:
1. One representative Welding Procedure Specification (WPS)
 2. Supporting Procedure Qualification Record (PQR)
 3. Welder Performance Qualification Record (WPQR) maintained current and qualified with records of period of effectiveness
