Supplemental Requirements for Building Fabricators (BU)

Preface

The 2023 revision is not a complete revision of the Supplemental Requirements for Building Fabricators (BU). The following changes have been made in this revision:

Section 1 Before Your Audit
- 1.5 - New

Section 2 During Your Audit
- 2.2 - Revision
- 2.4 - Revision

Scope

This document (hereinafter referred to as Supplements) provides the additional requirements for the Certification Program for Building Fabricators (BU) (hereinafter referred to as the Program).

Section 1 Before Your Audit

BU1.1 All Participants and Applicants are required to have available and comply with these Supplements and the Governing Requirements for Certification Programs (hereinafter referred to as the GRs).

BU1.2 The Standard for Certification Programs (hereinafter referred to as the Standard) is the primary normative document for all Certification Programs. Whenever there is a conflict between the Supplements and the Standard, the Supplements shall govern.

BU1.3 Standard Chapter 1 (General Requirements) and Chapter 2 (Building Fabricator Requirements) apply to this Program.

BU1.4 Participants and Applicants are eligible to apply for the Complex Coatings Endorsement (CCE 1, 2, or 3). For information and requirements concerning this endorsement, refer to GR Section 2, “Applying for Certification,” or Section 8, “Making Changes to the Certification Scope,” and the Supplemental Program Requirements for Applicants of Complex Coatings Endorsement (CCE).

BU1.5 Applicants to this Program must submit an application, payment, and all documents required by the Application Document Submittal for AISC Certification [https://www.aisc.org/certification/applicants].
Section 2 During Your Audit

BU2.1 The Quality Management System (QMS) that this Program applies to will be audited. Sample jobs/contracts of structural steel work meeting the scope of their certifications(s) and endorsement(s) will be used to demonstrate capability to meet the Program regardless of whether the job/contract requires an AISC certified fabricator.

BU2.2 Participants and Applicants are required to have work in the shop at the time of the audit that can be used to demonstrate compliance with the provisions of the Program. This work must be structural steel as defined in Section 2.1 of the Code of Standard Practice for Steel Buildings and Bridges (AISC 303). If it is known or suspected that there will not be this type of work in the shop at the time of the audit, please notify your assigned auditor immediately.

If you have not received your audit plan 30 days prior to your scheduled audit, please contact AISC.

Solutions may include a demonstration of capability (See GR 5.11) that follows the quality management system. Participants unable to adhere to this requirement prior to the expiration of their certificate will be referred to the Certification Review Group (CRG) who will make a decision on whether or not the certificate renewal process will be terminated.

BU2.3 Participants and Applicants will be audited and evaluated to ensure compliance with the current AWS D1.1/D1.1M, Structural Welding Code-Steel, regardless of whether this is required by the sampled contracts and specifications. Participants and Applicants shall maintain the following documents in compliance with AWS D1.1/D1.1M, Structural Welding Code-Steel and have them available for review during each audit:

- At least one representative Welding Procedure Specification (WPS)
- At least one supporting Procedure Qualification Record (PQR) when required
- At least one Welder Qualification Test Record (WQTR) (when required) maintained current and qualified with records of period of effectiveness

BU2.4 Participants and Applicants must perform a bolting method demonstration at each Initial Certification (RFN), Full Certification Renewal (RF) audit, first in-person audit when a Participant holds a Conditional Certification, scope change audits (as applicable) and as determined necessary by the CRG.

The demonstration shall comply with the current RCSC Specification for Structural Joints Using High-Strength Bolts Section 7, “Pre-Installation Verification.” This demonstration must be performed by personnel from the Participant’s or Applicants company who are typically involved in bolt installation.

BU2.5 Participants and Applicants must demonstrate that their Quality Control Inspector(s) (QCI) is/are qualified per current ANSI/AISC 360 Specification for Structural Steel Buildings Section N4. These qualifications must be stated by the Participant/Applicant in its quality management system, including experience and training requirements.
