AISC's Steel Shape Availability Survey **Producer Profile**

The following search interface gives you access to AISC's database of available structural steel shapes in the U.S. from major steel producers as well as which mills are producing the shapes.

This availability listing is useful in the design process as a reference to determine the general availability of specific shapes. Generally, where many producers are listed, it is an indication that the particular shape is commonly available. However, except for the larger shapes, when only one or two producers are listed, it is prudent to consider contacting a steel fabricator to determine availability.

For more information on specifying steel shapes, [click here](#).

Manual of Steel Construction

National Steel Bridge Alliance

MSC TRADITIONALLY PRINTS A LISTING OF ROLLED SHAPE AVAILABILITY INFORMATION IN ITS JANUARY ISSUE and a listing of HSS availability information in its July issue. However, the January listing did not appear this year due to production problems.

But have no fear! Even though it's not printed in MSC, the latest shape availability information is always available online at www.aisc.org/steelavailability. By visiting that link, you will find a utility that lets you search for availability information by shape or by shape producer. The web database is maintained by the shape producers themselves on a regular basis.

The availability listing is useful in the design process as a reference to determine the general availability of specific shapes. Generally, when many producers are listed for a given shape, it is an indication that the particular shape is commonly available. When only one or two producers are listed as producing a shape, it is prudent to consider contacting a steel fabricator to determine availability before specifying that shape. **MSC**
