A SNEAK PEEK AT SOME BRIGHT IDEAS

Tim Griffith

Jesse Kuroiwa

THESE THREE STEEL-FRAMED PROJECTS, in different scales and locations—San Jose, Denver and New York—all incorporate attractive means to bring in natural light.

They're also all winners in AISC's 2017 IDEAS² Awards program. The annual awards, whose name stands for Innovative Design in Engineering and Architecture with Structural Steel, recognize buildings based on aspects such as creative design approaches, impressive aesthetics, unique use of architecturally exposed structural steel and innovative design and construction methods. All of this year's winners were showcased at last month's NASCC: The Steel Conference in San Antonio.

Want to see and learn more? Check out next month's issue of *Modern Steel Construction*, which will provide full coverage—including lots of great imagery—of the winners. ■
